

Student job

Real-time web development

We are **free machines** and we help creatives to optimize user interfaces with AI. Our first product is Hypermaus, a SaaS for website personalization.

We are working with an Elixir/Phoenix web stack, connected via RabbitMQ to a Python Machine Learning backend.

What we offer

- The chance to work on **state-of-the-art real-time web technology**
- Experience working in an **early-stage startup**
- A **friendly & respectful team**
- A fancy office in the 25th floor of the Highlight Towers (U6 Nordfriedhof)
- Flexible hours
- Money

What you should bring

We value smart humans with a great cultural fit more than past experience. When in doubt, just talk to us.

- Knowledge in full-stack web development, ideally in Rails or Phoenix
- Experience in developing software as a team
- Bonus points if you have worked with a modern JavaScript framework
- Drive to write better and better code (rather than “just make it work”)
- Minimum of 15h per week for at least 3 months
